

## Customer Brief: Indiana Beach

### Overview

---

[Indiana Beach Amusement Resort](#) is located in Monticello, Indiana. It is a large amusement park, waterpark, and campground offering fun for the entire family. The Resort has installed state of the art wireless infrastructure to provide park-wide Wi-Fi Internet Access for guests and to connect Point of Sale systems located throughout the grounds. [Airwave Adventurers](#) is a Wireless Internet Service Provider (WISP) specializing in providing Wireless Internet to RV Parks, Marinas and Hotels across the United States.

### Application

---

Airwave was asked by Indiana Beach to design, install, and service a wireless system to support a number of applications, including public Internet access and a point of sale system. Airwave conducted an extensive site survey of the property and studied various equipment solutions. They concluded they needed multiple SSIDs, high power, reliability, and high security. They decided that ValuePoint Networks' gear provided them the superior combination of price and performance.

### Solution

---

Airwave Adventurers decided to utilize a ValuePoint Networks MultiAP 700G 400mW and 770G 1Watt MultiSSID/VLAN access points to support multiple applications across the system. In order to support the point of sale systems, Airwave opted for ValuePoint's SuperCPE model to give a superior signal to these devices. All APs and CPEs are powered by PoE.

Airwave chose ValuePoint's NC-3500, the leading gateway controller on the market, for the public Internet access throughout the park. The NC-3500 ties in nicely to the wireless infrastructure and with Airwave's RADIUS based Network Operating Center.

## Customer Testimonial

---

Jim Ames, President of Airwave Adventurers, is very pleased with the overall performance of the system. It provided the park with an outstanding solution in less than one week, where other vendors had failed. In fact, they are exporting the same design to other parks and point of sale systems.
