SIRICOMM SELECTS VALUEPOINT NETWORK FOR SIRICOMM WI-FI HOT SPOTS

Rugged, High-Power Access Points Provide Greater Wireless Coverage and Security

Joplin, MO. – December 29, 2005-- SiriCOMM, Inc. (OTC BB: SIRC), an applications service provider and nationwide broadband wireless network operator serving the highway transportation industry, today announced the selection of ValuePoint Networks' SuperAP™ access point for installation at SiriCOMM Wi-Fi Hot Spots.

SiriCOMM will install the SuperAP™ 500IA-18, a rugged self-contained Power-over-Ethernet wireless access point combined with an integrated 18 dB flat-panel directional antenna. The access points support point-to-point and point-to-multipoint bridging modes for up to 6 bridging links with full TCP/IP routing capability and advanced security features for public hot spot applications. Enclosed in a NEMA-style enclosure with moisture proof seals, the high-powered unit is ideal for long-distance outdoor applications similar to those found at truck stops, truck fleet terminals and weigh stations.

“We have been impressed and more than satisfied with the range, coverage, and reliability of the SuperAP product,” said Kory Dillman, executive vice president of SiriCOMM. “Using ValuePoint’s SuperAP product we can cover our hot spot venues with fewer access points, thus lowering our cost of implementation and improving our return on investment.”

“SiriCOMM is an excellent partner for us because the coverage and environmental demands created by the hot spot locations are a perfect example of where our products shine,” said David Grissom, ValuePoint Networks’ vice president of business development. “SiriCOMM challenged our product with rigorous testing and due diligence before selecting it, and we are thankful for that. We feel we always come out ahead when companies fully evaluate what is out there.”

About ValuePoint Networks

ValuePoint Networks is a manufacturer of controllers and rugged access points for distributed Wi-Fi applications. ValuePoint’s products are designed for the unique needs of service providers, wireless ISPs, billing providers, and venue operators in the

burgeoning public access space. This includes hotels, RV parks, marinas, airports, multi-tenant units, multi-dwelling units, and outdoor wireless applications. For more information on ValuePoint's controllers, rugged access points, and accessories, please visit www.valuepointnet.com

About SiriCOMM

SiriCOMM is an application service provider specializing in wireless Internet connectivity and productivity applications tailored to the transportation industry. By providing both network access and a robust application host platform, SiriCOMM delivers a responsive and convenient way for all industry stakeholders to interact with information needed on a regular basis. The company uses Wi-Fi technologies to create hot spots at locations convenient to highway travel. More information including network locations is available at <http://www.siricomm.com>
